There is a big number of different managing software available on the market, most of them free of charge.

Please refer to help or manual of the software, that you have chosen, how synchronization takes place.

### 5.1 COPY AND PASTE

General approach for most of the users is simply to copy files to the MP3 Player. As it is recognized as a mass storage device you can easily copy, delete or move files from any location to the device.

#### WINDOWS 98SE / ME

Bare in mind, that the s.beat MP3 Player has a file structure you should follow:

<b>DATA</b>	any kind of data like PDFs, text documents, PPTs etc.
<b>MUSIC</b>	music files MP3 / WMA / WAV / OGG
<b>BOOK</b>	audio books in MP3 / WMA / WAV format
<b>RECORD</b>	files recorded from radio, external source or microphone in WAV format

It is recommended that all other files are put to the root of the structure.

### 5.2 SYNCHRONIZING WITH WINDOWS MEDIA PLAYER®

The s.beat MP3 Player can be synchronized manually with the Windows Media Player. Synchronizing music files and playlists can therefore be partially automated in both directions by manually selecting “Synchronize”. Organizing your files will though be much easier.
